

# Fusion Genome

## Only Fusion Genome:

Fusion Genome is the only comprehensive and dynamic data mapping solution on the market. Unlike manual data mapping methods used today by most enterprises and consulting firms, Genome automatically mirrors companies' information universes as they change and evolve. Genome was built to reflect the way legal or IT teams think. Leveraging the strengths of the core Fusion engine, Genome integrates with third-party solution systems, including HR and asset management systems, as well as other Fusion solutions for a completely seamless approach to legal processes.

## Overview:

**Fusion Genome, the industry's only automated data mapping solution, is the strategic entry point for all legal governance, risk and compliance process management.** Genome provides enterprises, legal teams, and legal consultants with measureable ROI across the entire legal process management life cycle. Built on top of Exterro's Fusion workflow platform, Genome's automation accelerates response, reduces work, standardizes processes and most importantly, ensures an evergreen data map. Its rich visualization and cross-functional collaboration capabilities facilitate data remediation and provide a structured inventory for those internal and external teams tasked with identifying, collecting and producing relevant ESI, as well as providing a distinct advantage in meet-and-confer preparations. Fusion Genome delivers faster, smarter litigation response to e-discovery and regulatory compliance requests.

Genome

*"A lot of companies in today's economy are cutting their workforces; and when employees walk out the door, their knowledge walks out with them. But with Exterro's Fusion Genome, the risk of losing mission-critical data is greatly reduced. Genome provides a reliable, dynamic and usable framework for documenting, analyzing, and identifying corporate data sources and assets while linking this information to the appropriate personnel within a company's organizational chart. People come and go, so why rely on collective memory and spreadsheets when a defensible entry point to legal governance, risk and compliance process management is available?"*

*– A representative from a Fortune 500 energy company*

# Features and Benefits

**Automation:** Fusion Genome's automation accelerates response, reduces work, standardizes processes and, most importantly, ensures an evergreen data map.

- » **Template management:** Set up standardized and repeatable templates (questionnaires, interviews, workflows, etc.), that can be customized or created new. Capture all data sources in one place to search and share; access defined by role.
- » **Interview management:** Automated, repeatable and structured method for assembling interviews that help to identify key custodians and potentially relevant ESI. Includes HR search from third-party systems, as well as scoping, e-mail notifications, reminders and escalations, and tracking and activity monitoring.
- » **Custodian management:** Centralized location for all custodian information which can be leveraged across the entire Fusion platform.
- » **Data source information management:** Consistent capture of accurate information keeps relationships, history and usage up to date and evergreen; enables quick deployment of legal holds.
- » **Data Map Refresh:** Automatically keep data map evergreen by certifying systems are up to date; including policies and procedures, governance, and usage.

**Visualization:** Fusion Genome's rich visualization and intuitive navigation provide real-time, top-down/bottom-up views of business units, systems and matters.

- » **Walk-n-see data map:** Powerful visual representation of organization structure; multidimensional views by litigation profiles, business unit, record types, and other configurable criteria. Includes detailed drill-down by business unit topology; search by multiple parameters and hierarchies.
- » **Intelligent data sculpting:** Executive management console allows creation and viewing of customized lists of data in real time. Search results can be saved or exported for use by inside/outside teams. Filters data sources by litigation risk to address 26(f) conference negotiation and 30 (b2) deposition preparations.
- » **Navigation dashboard:** A visual overview of the data map, workflow and subcomponents. It is designed to mirror the way users think to create intuitive, user-friendly navigation.
- » **Data map dashboard:** Powerful visual reporting function that provides unique birds'-eye view of all changes, trends and relationships between systems by compliance regulation or system status. Reports can be exported to Excel, PDF or other formats.

**Collaboration:** Fusion Genome's powerful IT Portal provides a shared, structured inventory to legal, IT and RIM teams, as well as business units tasked with identifying and cost-effectively collecting and producing relevant ESI.

- » **IT Portal:** A personalized portal for IT and business managers to see and communicate what systems they own; see how employees interact, acknowledge legal holds, edit systems and interview requests, etc. Enables consistent communication of compliance needs across the enterprise; keeps IT and compliance officers alerted to potential compliance violations; gives legal teams insight into where potential risks exist.
- » **Legal hold indicator:** Highlight all active legal holds in the system, ensuring compliance with FRCP rules.

**Fusion: A platform designed to meet your growing legal workflow needs**

Fusion serves as the backbone to an innovative, growing family of products - Fusion Legal Hold, Fusion Discovery Workflow Management, FusionGo, and Fusion Genome - that integrate seamlessly with each other and with external applications, such as HR and asset management systems. Fusion enables legal teams to work from a single platform to meet e-discovery and information management needs from end to end, leveraging the strengths of all of existing business processes and applications while minimizing training and implementation times.
