

Dedicated to Your Success

The integration between Exterro's Fusion and Recommend's Accelerate ECA & Collection streamlines e-discovery management and execution. The joint solution delivers the process transparency and true collaboration, usability and visibility demanded in today's litigation hold process on one completely automated and integrated platform. Together, they provide a legally defensible and integrated litigation hold and e-discovery solution that facilitates the workflow between internal and external teams, and accelerates the identification, collection and preservation of data.

Exterro Fusion Core Platform

Exterro's Fusion is an end-to-end legal governance, risk and compliance management solution suite. Architected around a single, centralized workflow platform, Fusion streamlines legal processes by facilitating collaboration and visibility across disparate entities: in-house legal teams, outside counsel, different business units, and service providers. Fusion integrates processes and data from many third-party systems, including HR, asset and matter management tools, and EDRM review tools. Fusion orchestrates essential services in ensuring faster, smarter litigation preparation, response to e-discovery and regulatory compliance requests and simplifying legal processes through automated workflow management.

Recommend Accelerate ECA & Collection

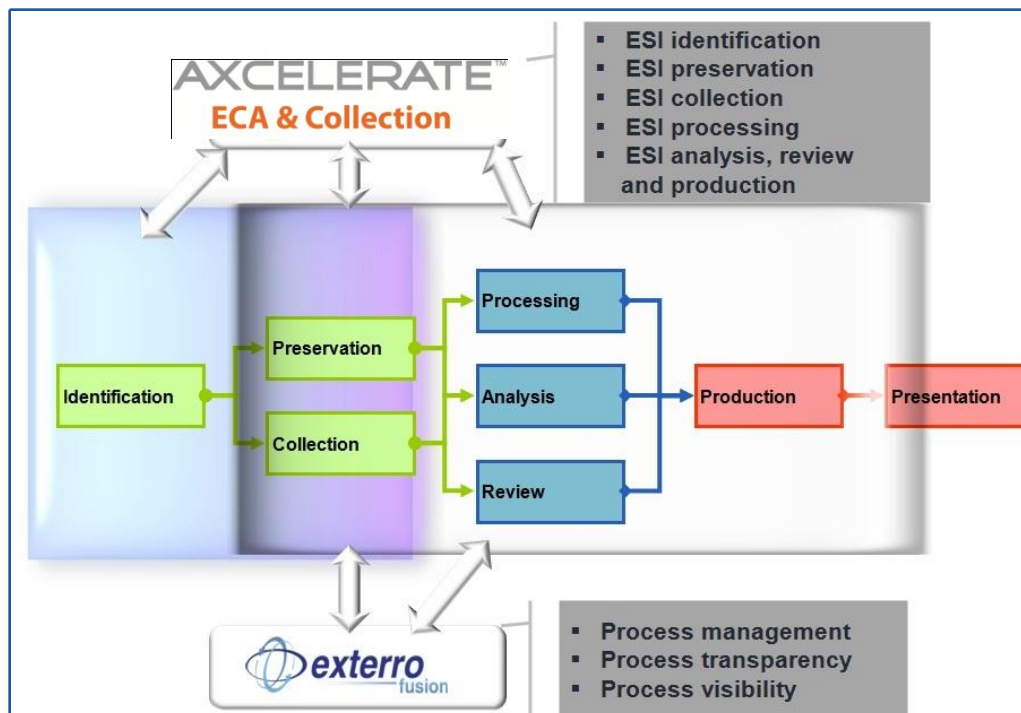

Accelerate ECA & Collection identifies, crawls and indexes information from many enterprise data sources. From these indices, enterprises can conduct "live" explorations of data to quickly and efficiently locate potentially relevant data. As relevant data is identified, a hold procedure is applied to the specific ESI. If this data is revised or new data is added to a data source, Accelerate can automatically update the hold to ensure compliance. Enterprises can review potentially relevant data using Accelerate's sophisticated search and sampling technology. Accelerate also provides enterprises with a full-view across multiple holds and matters for effective case management and risk mitigation.

Fully Defensible Process

Using the Exterro Fusion EDRM connector to Recommend, attorneys can use Fusion to specify data map, legal hold, records retention/destruction suspension or reengagement requests or collection criteria, and Accelerate ECA & Collection to search data sources to find and store ESI in a non-disruptive, seamless fashion. Accelerate then publishes a comprehensive chain-of-custody log, including metadata back to Fusion, ensuring a thorough and defensible e-discovery process.

Benefits to Legal

- Eliminates miscommunication and reduces risk of error when translating matters from legal to IT.
- Both Exterro and Recommend automate eDiscovery processes to incorporate industry best practices and corporate policies, ensuring repeatable and defensible processes across the EDRM. The joint solution brings back all information legal team members need to manage discovery from all applications.
- Collaboration capabilities built into the Fusion platform enable legal teams to work closely with outside counsel, IT teams and records management in defining and executing collection requirements.
- Fusion's integration to Recommend allows the legal team to manage e-discovery from a single, user-friendly platform.
- Assures the legal team that records policies are suspended and re-engaged appropriately for data affected by legal holds.
- Recommend's legal hold capabilities include preservation of all content and metadata, full audit trails, single instance storage, and comprehensive reporting.
- Throughout the integration of Fusion and Recommend, all systems, activities, and processes are audited making it more defensible than a manual process.

Benefits to IT

- Records retention and destruction policies – and corresponding data preservation, collection, and disposition processes – are automatically suspended or re-engaged as necessary.
- Fusion specifies data map, legal hold or collection criteria, Axcelerate searches and crawls data sources to find and store the ESI, then publishes a comprehensive chain-of-custody log, including metadata, back to Fusion, ensuring a thorough and defensible e-discovery process.
- Directly ingest native files for processing and review.
- Fusion provides the workflow interface between internal and external teams to facilitate and accelerate Recommind’s execution of data collection and early case assessment.
- Axcelerate’s conceptual search engine automatically identifies key phrases, concepts and people.

Recommind and Exterro

Joint Solution Benefits:

Today’s legal discovery process has evolved to become increasingly complex and costly. Companies are now faced with an escalating amount of ESI. Legal matters have grown in frequency, and often involve multiple law firms, custodians and experts in disparate geographies. The Recommind and Exterro unified offering allows companies to significantly reduce legal risk and litigation costs associated with e-discovery, and delivers immediate control over the information legal teams choose to preserve and collect.
