

## Dedicated to Your Success

Together, Exterro® Fusion™ and Datacert® Passport™ provide an enterprise solution which simplifies the handling of e-discovery matters. By streamlining the process by which legal holds are created for matters, counsel can ensure timely, accurate execution of preservation orders and achieve full visibility of results for reporting purposes. Early Case Analysis and collection can be executed quickly and efficiently, and risk can be accurately monitored and controlled.

### Exterro Fusion

Exterro's Fusion focuses on workflow-driven e-discovery. The Fusion suite of applications provides end-to-end coverage of organizational requirements to identify, preserve, collect, analyze and review information associated with a matter. Fusion Legal Hold scopes out preservation orders and notifications required by the courts; Fusion Discovery Workflow Management helps manage e-discovery projects; and Fusion Zeta handles early case assessment, evidence collection, culling and in-house review.

### Datacert Passport

Datacert's Passport technology platform enables corporate legal departments, law firms, and other legal service providers to unite their legal and enterprise systems on a secure, collaborative framework. Passport's Legal Matter Management application provides a comprehensive view of the relationships between costs, financial and business risk, legal department workload, outside counsel activities, and matter status. Passport Legal Spend Management controls costs by capturing detailed spend information from outside counsel, automating auditing processes, and enabling counsel to analyze matters at individual and aggregate levels.

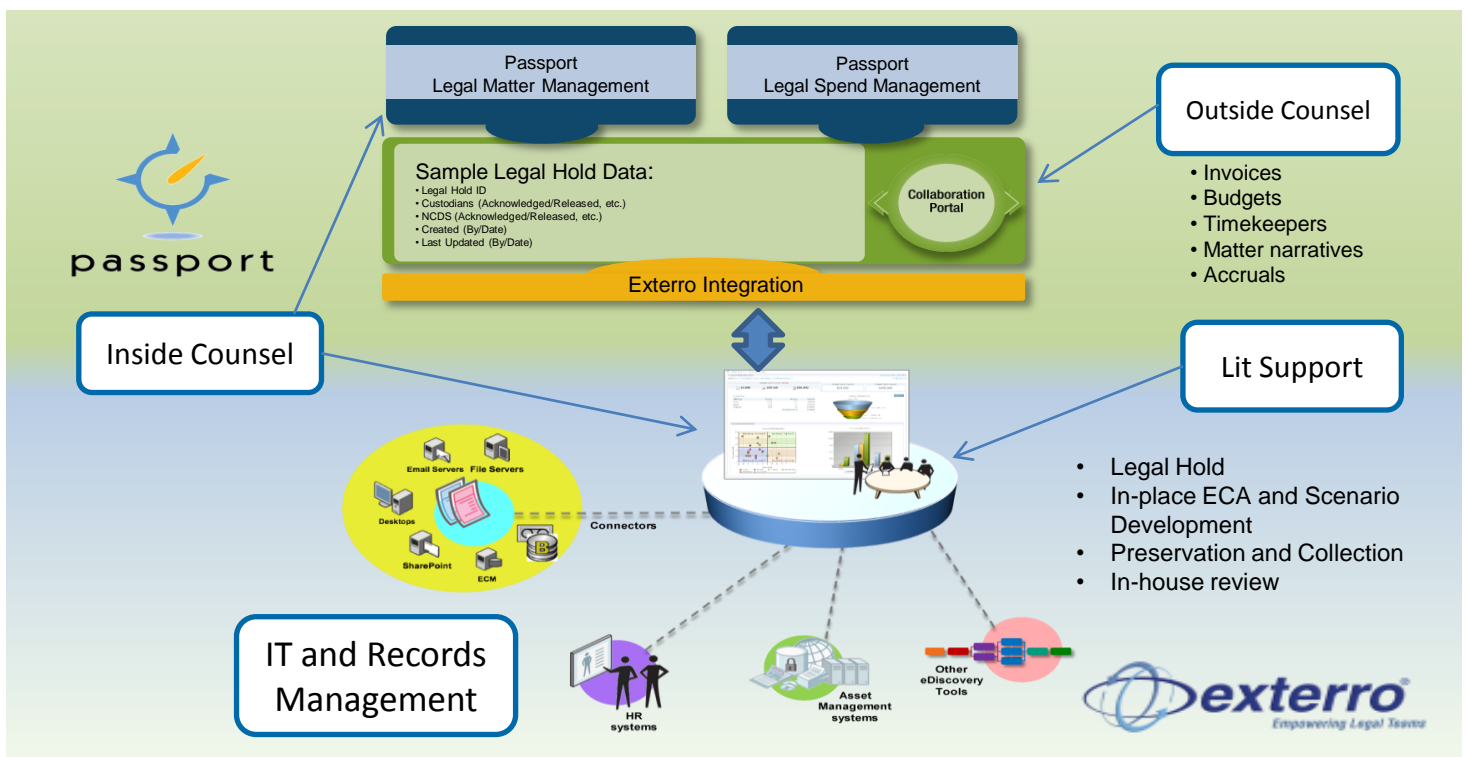

## Automating Legal Processes

Exterro Fusion's integration with Datacert's Passport allows users to create matters in Passport Legal Matter Management. Matters requiring a legal hold can be flagged within Passport, which triggers synchronization of all relevant matter management information to Exterro Fusion Legal Hold and creates a pending task for e-discovery teams in its workflow. In addition to keeping data consistent across systems, single sign-on and quick links allow Passport users to navigate directly to Fusion Legal Hold and quickly access relevant information about custodians. Likewise, Exterro Fusion users can view relevant matter information stored in Passport.

Technically, the integration is built on a modern web services infrastructure. This provides a reliable and secure conduit between the Passport and Fusion systems, giving IT flexibility in where each is deployed. Both systems could be installed, administered and maintained behind a client's firewall, remotely hosted, or a combination of locally and remotely-hosted deployment.

## Benefits to Legal

- Streamlines management of matters involving preservation holds.
- Mitigates risk by automating the creation of preservation hold requests.
- Eliminates manual tasks and cuts down on attendant communication errors.
- Reduces duplicate work and rekeying of information.
- Expedites e-discovery by leveraging matter information in subsequent legal hold, ECA and collection activity.
- Automatically closes the loop by passing key e-discovery processing information about matters back to Passport.
- Provides counsel with complete and up-to-date visibility into matter activity.
- Provides counsel with an end-to-end litigation management solution.

### Benefits to IT and e-Discovery teams

- Reliably coordinates matter information.
- Delivers flexibility in deployment, whether on premise or hosted in a secure SAS-70 compliant cloud.
- Ensures accurate, timely communication of e-discovery requirements between Legal and IT.
- Reduces reporting burdens on the status of hold and collection requests.

### Datacert and Exterro Joint Solution Benefits:

Today's legal discovery process has evolved to become increasingly complex and costly. Companies are now faced with an escalating number of matters involving Electronically Stored Information (ESI). Legal matters have grown in frequency, and often involve multiple law firms, custodians and experts in disparate geographies. The Datacert and Exterro joint offering allows companies to significantly reduce legal risk and litigation costs associated with e-discovery, and delivers immediate control over the information legal teams choose to preserve, collect, analyze and review.
