

Exterro Fusion™ Integration Hub

Visibility and Control

Exterro Fusion’s integration hub delivers visibility into and control over litigation processes

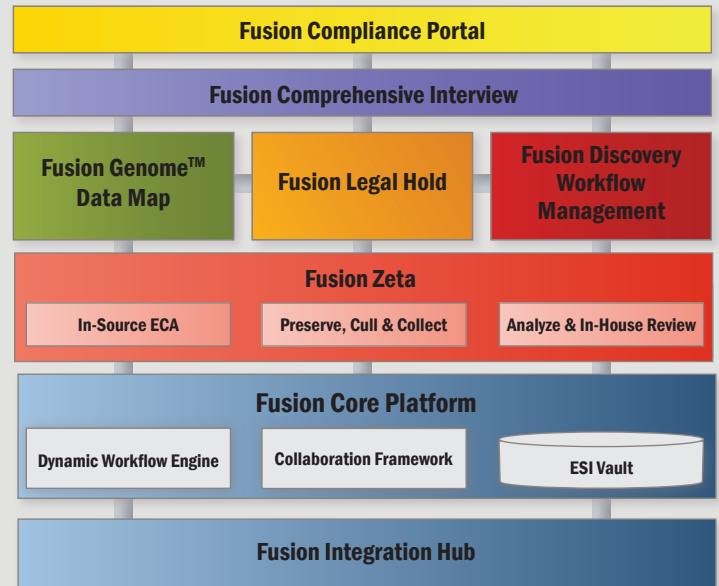

The Fusion Integration Hub™ enhances the power of Exterro Fusion applications, leveraging prior investments in IT infrastructure and specialized EDRM tools. The Hub provides a single point of management for litigation information and processes, capturing and translating relevant data, orchestrating project execution across the EDRM, and reporting on the results.

Exterro Fusion Integration Hub increases legal team productivity for faster, smarter execution of critical cross-functional tasks. Integrations facilitate collaboration, eliminate data duplication and result in significant time savings. Fusion integrates with commonly deployed EDRM tools from Datacert, Recommind, Clearwell, StoredIQ, and Symantec, as well as enterprise systems like HR and asset management solutions.

Fusion Integration Hub also supports connectors to common ESI data sources, such as PCs, email systems, fleshares and content management systems.

“Exterro’s ability to quickly meet our business and legal process needs and integrate with our IT infrastructure processes helped us achieve rapid time to value for Exterro Fusion™. Our success is evidence of a strong partnership with Exterro, the strong business value of their solutions, their ability to quickly understand and meet disparate business process environments, and the innovative culture and support of UTC.”

Exterro Fusion™

Built to reflect how legal and IT Teams Think

Exterro Fusion is an integrated solution suite backed by the full power of the Exterro Fusion workflow and data management platform. Its collaboration framework, dynamic workflow engine, secure ESI vault and audit trails enable efficient execution of end-to-end e-discovery projects. The Fusion Integration Hub allows Fusion Zeta, and all Fusion solutions, to integrate with the IT infrastructure already in use, like HR or asset management systems, as well as other EDRM tools. With Exterro Fusion, legal and IT teams get the benefit of the legal industry’s most trusted platform and its 360-degree visibility into and control over all litigation tasks and projects.

To learn how Exterro can deliver value to your organization, contact an e-discovery expert at info@exterro.com or call 877-EXTERRO.

Features and Benefits

EDRM Adapters

Exterro's open approach makes it easy to leverage existing or planned investments in common EDRM tools used in e-discovery. Fusion's Integration Hub captures and translates data, dispatches work to other applications, correlates activities, and summarizes results so discovery teams can efficiently complete projects and avoid ambiguity.

Exterro's bi-directional adapters are full-featured and architected with partners to ensure closed-loop integrations with the following companies:

- Recommend Accelerate ECA and Collection®
- Clearwell E-Discovery Platform®
- Symantec Discovery Accelerator™
- StoredIQ Intelligent Information Management Platform™
- Datacert® Passport™

Infrastructure Integrations

Integrations through web services, CSV files, and other data transfer mechanisms ensure Exterro Fusion users are alerted when key changes occur in other systems.

- **HR:** Ensure the legal team is alerted to key changes in employee status, enable historical scoping of custodians and deliver executive-level views into company-wide employee information through Fusion's HR adapter, which can accept data from multiple HR systems.
- **Asset Management:** View IT infrastructure and data landscape and contribute to a complete data source map through Exterro Fusion's asset management system adapter. Automatically feed and refresh custodians' data source information, such as data type, location, identification and quantity, into Fusion.
- **Matter Management:** Integrate Fusion with third-party matter management tools. Reduce manual data entry and errors, pull selected custodians into Fusion whenever desired, and leverage current technology investments.
- **Single Sign-On:** Enforce corporate security standards in Fusion by integrating with legacy single sign-on solutions and intranet portals so IT teams can manage users from a single location.
- **LDAP:** Authenticate with Microsoft Active Directory or any Lightweight Discovery Access Protocol (LDAP) directory. User authentication and credentialing can come from tools such as IBM Tivoli, CA Site Minder or Oblix COREid, or Microsoft. In a hosted environment, Exterro will connect via a VPN and secure FTP or IPsec tunnel. Fusion enforces valid login and password for system access and sign-in.

ESI Connectors to Data Sources

Exterro Fusion's Integration Hub connects users to the most common sources of ESI. In addition to centralizing access to critical organizational data, Exterro's ESI connectors facilitate inspecting and searching files and metadata to help evaluate collection efforts and locate responsive information. ESI connectors play a critical role in moving data to Fusion's secure ESI Vault during the collection phase.

Here's a sample of the ESI data sources supported by Exterro's Integration Hub:

- Personal computing devices like desktops, laptops and tablets
- E-mail systems like Microsoft Exchange and Lotus Notes
- Chat and instant messaging logs like Lotus Sametime and Microsoft Messenger
- Network file shares
- Microsoft SharePoint™ social web development software
- IBM Lotus Quicr™ social team collaboration software
- IBM Lotus Notes™ and Domino™ databases
- Enterprise content management (ECM) systems like IBM FileNet™, OpenText™, and Oracle Universal Content Management

For Legal

- Complete control over and visibility into the entire EDRM
- Eliminate the risk of missing critical custodians or data
- Prevent and defend spoliation claims
- Reduce discovery costs
- Defend preservation process and discovery audit trail
- Rapid service delivery
- Scalable to handle any number of cases

For IT

- Critical component of a company's IT infrastructure
- Streamlines all IT-legal interaction
- Delivers relevant, usable requirements and work orders
- Non-disruptive deployment is configurable to your IT infrastructure
- Provides visibility into electronic discovery tasks for resource and workload management

For Executives

- Rapid time to value with proven defensibility
- Cut discovery costs
- Increase efficiency and productivity
- Automate legal and IT workload and resource management
- Improve vendor relationships
- Build upon existing technology investments
- Support current business processes and drive compliance company-wide
