

Repeatable, Defensible E-discovery with High Scalability and Performance

DEDICATED TO YOUR SUCCESS

Together, Exterro and Catalyst provide an enterprise solution that streamlines the e-discovery process. Integrating “behind-the-firewall” functions, like early case assessment (ECA) and forensic collections, with “outside-the-firewall” operations, such as external, multi-party review, allows organizations to succeed with state-of-the-art technology and services that leverage existing processes, IT investments and outside experts. ECA, document export, legal review and production can take place quickly and efficiently, and be seamlessly integrated with earlier information management and preservation processes. In addition, external work product can be leveraged across many matters, saving time and money, as well as maintaining consistency.

EXTERRO FUSION®

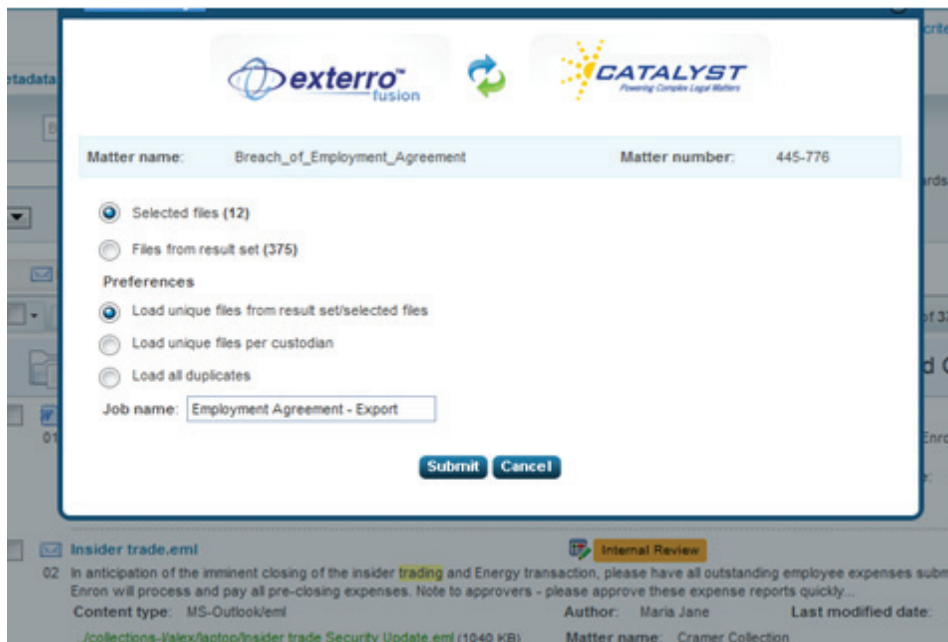

Exterro’s Fusion® empowers workflow-driven e-discovery. The comprehensive Fusion suite of applications provides end-to-end coverage of organizational requirements to identify, preserve, collect, cull, analyze and review electronically stored information (ESI) associated with a matter. Fusion Legal Hold™ enables legal teams to scope out preservation orders and issue notifications required by the courts. Exterro’s Discovery Workflow Management™ provides the visibility and tracking tools required for managing e-discovery projects; and Fusion Zeta™ facilitates early case assessment, evidence collection, culling and in-house review.

CATALYST REPOSITORY SYSTEMS

Catalyst’s legal review platform enables corporate legal departments, law firms and other service providers to link their e-discovery processes with their outside counsel and experts. Catalyst provides multi-matter capabilities for corporate counsel to set workflow, manage progress, reuse work product and complete the full information lifecycle by re-integrating work product. Catalyst’s approach emphasizes structured, managed review workflow, mirroring the efforts undertaken within enterprises. Litigators and reviewers benefit from active analysis of their collection, narrowing the review set precisely and transparently.

BENEFITS FOR LEGAL AND E-DISCOVERY TEAMS

- Streamline ECA-to-review processing
- Mitigate risks by automating handoffs between systems
- Eliminate manual tasks and reduce attendant communication errors
- Experience true multi-matter support
- Expedite e-discovery by leveraging matter information in subsequent legal hold, ECA and collection phases
- Automatically receive key, real-time review metrics from external reviewers to internal parties through a closed-loop reporting process
- Achieve complete and up-to-date visibility into all matter activity across all EDRM phases
- Enable greater reuse of work product across matters
- Gain an intuitive, end-to-end e-discovery management solution that’s specifically designed for corporate legal departments

AUTOMATING HANDOFFS AND REVIEW

Integrating Exterro Fusion with Catalyst’s review platform provides users the ability to perform ECA in place to assess the merits of a case, identify all potentially relevant ESI, perform targeted collections of the ESI, and automate the export of the ESI for external review to Catalyst. Data interchange is simple and fluid, allowing for incremental collections and exports as needed. Legal and IT teams maintain complete visibility and control over the entire litigation cycle, with end-of-matter reporting.

Technically, the integration is built on the Fusion Integration Hub and a robust web services infrastructure. This provides a reliable, secure conduit between the Catalyst and Fusion systems. Catalyst operates a secure hosted environment and complements the functions installed inside the organization powered by Exterro Fusion.

CATALYST AND EXTERRO - JOINT SOLUTION BENEFITS

Today’s legal discovery process has become increasingly complex and costly. Organizations are constantly facing an escalating number of legal matters involving ESI from unstructured, semi-structured and structured data sources inside and outside the corporate firewall. Responding to the discovery obligations associated with the legal matters often involves multiple law firms, custodians and experts in disparate geographies. The integrated Catalyst and Exterro solution delivers significant reductions in the legal risks and costs associated with e-discovery and delivers immediate control over data under management at all phases of the process.

BENEFITS TO IT AND RECORDS MANAGEMENT

- Deploy the most flexible, unified e-discovery platform either on premise or hosted in a secure SAS-70-compliant cloud
- Automate the data mapping and ESI identification process, with complete views into the IT landscape and employee data assets
- Enable defensible ESI collection with automated processes that are conducted seamlessly across unstructured and structured data sources
- Seamlessly integrate with IT, archiving, content management, HR and records management systems for defensible destruction policy suspension
- Seamlessly and securely support the transfer of collected ESI inside and outside the organization as required for defensible e-discovery response
- Enable greater collaboration between legal, IT and records management teams through predictable and configurable workflows
